

Yachats Landslide Susceptibility

Tax lots exposed to rapidly moving landslides and susceptible to "high" and "very high" categories of landslide

The Oregon Dept. of Geology and Mineral Industries (DOGAMI) has produced two reports on landslides that include Yachats: Interpretive Map Series IMS-22, GIS Overview Map of Potential Rapidly Moving Landslide Hazards in Western Oregon, 2002, and Open-File Report O-16-02, Landslide Susceptibility Overview Map of Oregon, 2016. This map shows tax lots within Yachats affected by these hazards.

In the legend, "High" and "Very High" refer to report O-16-02, for a total of 628 affected tax lots. "Rapidly" refers to report IMS-22. A total of 748 tax lots are at risk from a landslide hazard as mapped by these two referenced reports. This does not preclude other tax lots from landslide risk.
